Green, Jim, [Australia's Anti-Nuclear Movement: a short history](#) [24], Green Left, issue 30, 26/08/1998,

The article examines the linkage between activists concerned about Australia supplying uranium for US and British nuclear weapon programmes, and its close military alliance with the US, and the environmental groups focusing on the dangers of civilian nuclear energy. Green argues that resistance to nuclear energy was weak and isolated before the 1970s, but gained significant, nationally coordinated, support in 1976-77, which swung the Labor Party against uranium mining and exports. The movement highlighted the dangers of uranium mining for Aborigines and workers in the mines, as well as the environmental impact; and it opposed Australia's role in the cold war nuclear confrontation (having US bases and allowing US nuclear warships to visit Australian harbours). It also publicized the secret history of the health impact of British nuclear testing in Australian deserts on Aboriginal people. However, the movement lost momentum in the 1980s and failed to prevent the Labor Party, when in government from 1983, abandoning its strong opposition to uranium mining.

The antinuclear campaigns that led up to and contributed to the negotiation of the Treaty began some 25 years earlier and may be divided into three broad waves.

Its emphasis was on public appeals, lobbying in Washington and backing peace candidates in the 1962 primaries, and its support was mainly from intellectuals and some business people; students tended to support more radical groups and nonviolent direct action against tests and bases was carried out by groups like the Committee for Nonviolent Action.

In the last decade of the Cold War, during the 1980s, the Peace Movement in Vancouver, BC, gained an unprecedented amount of traction. However, was short-lived as peace activists dwindled in the 1990s and beyond. In this article Christine Kim explores what were the factors that caused the peace movement in Vancouver to fail and whether its legacy is one that supports the value of political activism as a powerful agent for change. The author interviews students, professors, and activists from the Vancouver Peace Movement of the 1980s in an hour-long radio documentary.

Okamura, Yukinori, [The Hiroshima Panels Visualize Violence: Imagination over Life](#) [42], Journal for Peace and Nuclear Disarmament, Vol. 2, issue 2, 2019, pp. 518-534

After experiencing the atomic bombing of Hiroshima in August 1945, Chinese-ink painter Iri Maruki and oil painter Toshi Maruki began their collaboration on the Hiroshima Panels in 1950. During the Allied occupation of Japan when reporting on the atomic bombing was strictly prohibited, the panels made known the hidden nuclear sufferings through a nationwide tour. In 1953, the panels began a ten-year tour of about 20 countries, mainly in East Asia and Europe, and disseminated the Hiroshima stories in the age of the US-Soviet arms race. The Marukis embarked on a new direction in the 1970s, with their emphasis on complex realities of war in which the victim/perpetrator dichotomy was not clear-cut, and explored other forms of violence such as pollution and discrimination.

Demonstrates that direct action was initiated at the grassroots level but in time accepted by CND leadership.

[Movement](#) [47], In Iacobelli, Pedro, Danton Leary, Shinnosuke Takahashi (eds) *Transnational Japan as History*, New York, Palgrave Macmillan, pp. 187-210

The end of World War II saw the emergence of a new public arena for imagining a “world society” in which nation-states would cooperate to achieve peace, a dramatic change from the previous world of competitive nation states engaging in multiple wars and imperial expansions. But, the author argues, this call for “world peace”—a renewed political imaginary after the failed attempt of the League of Nations and the Kellogg–Briand Pact—was not simply empty political rhetoric or a naive utopia. Its (re-)creation led to vigorous debate that resulted in various transnational political institutions and forms of transnational activism in the aftermath of the war.

This thesis focuses on the 1986 Great Peace March for Global Nuclear Disarmament that lasted nine-month and covered 3,325 miles, from Los Angeles to Washington, D.C. The author coins the term ‘endurance activism’ and explores two central questions: What is the relationship between long-distance walking and the politics of social movements? To what extent does ‘endurance’ shape meanings of the March’s related but twin goals: the building of a “prefigurative” community, and a mass movement capable of attaining media coverage and achieving concrete, or “strategic” political outcomes?

Waterston, Elizabeth ; Boulton, Frank, [A history of British health professionals working for the abolition of nuclear weapons](#) [54], *Medicine, Conflict and Survival*, Vol. 34, issue 4, 2018, pp. 350-359

In 1963 medical and dental professionals in the United States and the United Kingdom played an important role in highlighting the health threat posed by atmospheric nuclear tests. Analysis of the deciduous teeth of American children born during the testing years showed the widespread presence of Strontium-90, a radioactive fission product that accumulates in babies' teeth. The outrage of parents made fallout a central issue, and so put pressure on the US and UK governments to agree to the Partial Test Ban Treaty.
