Chatterjee, Shritama, [Reading Climate Justice through the Indian Farmers' Movement](#) [1], Edge Effects, 2021

This article positions the Indian farmers' movement within a conversation about climate justice because a significant demography of farmers in India are dependent on rainfall for the growth of crops. The author highlights that due to uneven rainfall patterns caused by climate change, instances of drought and rainfall are frequent, leading to a feeling of uncertainty about rainfall and sense of insecurity about crops.
