

Kill Chain: Drones and the Rise of High-Tech Assassins

Author: [Andrew Cockburn](#) [1]

Verso, London, 2015, pp. 336 (pb)

Critical assessment of today's 'military industrial complex' and also the role of drones in the US wars in Afghanistan and in targeting 'terrorists'. Cockburn documents the technological failings of drones, often unable to distinguish targeted individuals from others nearby, and the 'trigger-happy' attitudes of some soldiers using them. Both led to numerous mistaken deaths.

See also: Frew, Joanna, 'Drone Wars: the next generation', *Peace News*, 2618-2619, June-July 2018, p. 4.

Frew summarizes a new report, issued by Drone Wars UK, on development and use of armed drones by a 'second generation' of nine states (including China, Iran and Turkey) and several non-state actors developing and using armed drones. (The first group was the US, UK and Israel.) The report also estimates that a further 11 states would soon be deploying drones, and that China was increasing export of them. Frew stresses the urgent need for international controls, and queries whether existing controls on exports (already being undermined in the US) were adequate.
