

Why Are We Waiting?: The Logic, Urgency, and Promise of Tackling Climate-Change. Lionel Robbins Lectures

Author: [Nicholas Stern](#) [1]

MIT Press, Cambridge, MA, 2016, pp. 448 (pb)

Economist Nicholas Stern led research for the British government on the economic costs of tackling climate change and implications for the global economy and compared these costs with those resulting from unchecked global carbon emissions. His 700 page highly technical report of 2006 concluded that cutting carbon emissions would be very significantly less economically harmful than the impact of unchecked emissions. This book, published 10 years later, warns that the risks and costs of global warming are more serious than he estimated in 2006, and argues strongly for a comprehensive low-carbon transition.
