## **Against Doom: A Climate Insurgency Manual**

Author: [Jeremy Brecher](#) [1]

pm Press, Oakland, CA, 2017, pp. 128

The author is an activist who sees the potential for a global movement to prevent disastrous climate change by forcing corporations and governments to adopt more radical policies, focusing in particular on ending use of fossil fuels. He gives examples of action from many parts of the world. But his primary emphasis is on developing a strategy (including civil disobedience) for activists in the USA, stressing the need to undermine support for fossil fuel industries but also to build parallel institutions such as popular assemblies.
