

The Dynamics of Frame-bridging: Exploring the Nuclear Discourse in Scotland

Author: [Antje Brown](#) [1]

In: Scottish Affairs, Vol 26, No 2, 2017, pp. 194-211

Brown discusses why the devolved Scottish government has opposed both nuclear energy as a power source, and also strongly opposed the UK government's decision to renew the Trident missile (which carries nuclear warheads) for the submarine fleet based at Faslane. Although there are several factors, such as abundant resources available for energy, Brown argues that the Scottish government's stance can be best understood by 'considering the underlying (and deliberate) bridging of policy frames that is noticeable between environmental, pacifist and Scottish independence actors'.
