## **Hydroelectric is not Clean Energy - it is Mixed with our Blood**

Author: [Jonathan Watts](#) [1]

In: The Guardian, 2017, pp. 29ff

This article covers a major struggle for indigenous rights and environmental protection in Brazil, opposing construction of 49 dams on the Tapajos river and its tributaries to generate electricity and to create a canal to a major new container port. The scheme is backed by the Brazilian government and includes finance and engineering from Chinese and European companies, and would provide power to soya growers and mining companies. It threatens the home of the Munduruku tribes and an area of pristine rainforest. The protesters gained a partial victory in 2016 when the Brazilian environmental agency suspended the license for one dam, but the local people fear renewed pressure.
