## **National Family Health Survey (NFHS-4), 2015-16: India**

Author(s): [International Institute for Population Sciences \(IIPS\)](#) [1], [ICF](#) [2]

IIPS, Mumbai, 2017, pp. 637

A large scale survey conducted in a representative sample of households throughout India. It reports that 30% percent of women aged 15-49 in India have experienced physical violence since age 15, amongst many other forms of violence or discrimination, and the social context that makes it difficult to challenge. The National Family Health Survey 2018-2019 is yet to be published.
