

There is No Planet B - A Handbook for the Make or Break Years

Author: [Mike Berners-Lee](#) [1]

Cambridge University Press, Cambridge, 2019, pp. 288

Berners-Lee, from the Institute for Social Futures at Lancaster University, starts by summarizing the arguments for the urgent need to stop using fossil fuels and by assessing the climate science. He then examines a wide range of issues involved in transforming energy policy, transport, food supply, business models, and technological possibilities, providing important detail on, for example, the implications of alternative technology choices for fuel.
