

Farm Protests in India. A New Menu Needed

Author: [Ajay Chibber](#) [1]

Institute for International Economic Policy 2021, pp. 17

The author argues that Indian agricultural policy, devised in response to food shortages in the 1960s, relied on a mix of technological solutions to increase yields and a range of pricing measures to support farmers. These policies are out of date, but changing the overall policy is difficult as farmers believe their livelihoods are at stake. This paper considers the issues behind the protests and suggests ways forward.
